

Software built around *your* *company.*

The frozen brand system for Company Native: strategy, message, identity and the practical assets needed to win the first 10 customers.

THE BELIEF

Companies should not
adapt to software.
*Software should adapt to
companies.*

Company Native learns how a business really works, designs the system it needs, builds and migrates it, and keeps improving it. CRM is the first customer-facing system we transform.

Large ambition.
Safe first step.

Start with one useful improvement that requires no migration. Prove value, learn from real use and move only when the replacement is already better.

TAGLINE

Software built around your company.

FIRST OFFER

Company-native CRM, handled end to end.

They want freedom from generic CRM. They do not want to gamble the business to get it.

BEFORE

Constrained

Important work happens in spreadsheets, inboxes and people's heads because the CRM does not fit.

DURING

Safe and understood

The first move is small. The team observes real usage, speaks to power users and proves every change before migration.

AFTER

In control

The system removes work, reflects the company's own process and remains owned by the customer.

The promise must always answer

Will this disrupt us?

Can you really do it?

What happens first?

Who owns the software?

Is our data safe?

Will people actually use it?

Primary audience

B2B founders, CEOs, COOs, commercial leaders and CRM owners in companies where CRM now controls sales, delivery or service and generic tools have become a constraint.

Best fit: the process is important, the pain is repeated, and leadership wants a better operating model rather than another configuration project.

Lead with the customer's constraint. Earn the right to explain the larger vision.

CATEGORY

Company-native software

FIRST OFFER

A custom CRM designed, built, migrated and improved end to end

HERO

Your CRM should fit your business. Not the other way around.

TAGLINE

Software built around your company.

ONE SENTENCE

We learn how your company really works, build the CRM you need, migrate your data and keep improving it - without disrupting your team.

WHY NOW

AI-assisted development and reusable engineering patterns now make deeply adapted software practical without turning every project into a blank-sheet build.

PROOF

10+ years in CRM and automation. More than 450 Swedish companies served through FunnelBud.

FIRST ACTION

Start a conversational CRM assessment and find one useful improvement that can be tested before migration.

Same idea, written naturally in each language.

ENGLISH

Software built around your company.

Umbrella tagline

Your CRM should fit your business. Not the other way around.

Primary CRM headline

Value now. No migration.

VO promise

Migrate to something proven - not to hope.

V1 risk answer

You own the software. Forever.

Ownership answer

Company-native CRM

Offer label

SVENSKA

Programvara byggd runt ert företag.

Övergripande tagline

Ert CRM ska passa er verksamhet. Inte tvärtom.

Primär CRM-rubrik

Värde nu. Ingen migrering.

VO-löfte

Migrera till något bevisat - inte till ett hopp.

V1-svar på risken

Ni äger programvaran. För alltid.

Svar om ägande

CRM byggt för ert företag

Erbjudandetikett

Ambitious about the destination. Calm and concrete about the next step.

EXACT, NOT TECHNICAL

Name the real action: observe usage, remove work, build, migrate, train and improve. Explain internal methods only when they add trust.

WARM, NOT CUTE

Talk like an experienced operator who understands people. Avoid playful AI language, mascots and exaggerated friendliness.

AMBITIOUS, NOT GRANDIOSE

State the larger belief clearly, then connect it to a safe VO and a proven V1.

CONFIDENT, NOT ABSOLUTE

Use proof, ownership and process. Do not promise impossible timelines, perfect automation or automatic business results.

Say this

We start with one useful improvement in your current setup. Your team gets value immediately while we learn how the work really happens.

Do not say this

Our revolutionary autonomous AI platform transforms your entire revenue engine with seamless next-generation intelligence.

The system adapts around one distinct company core.

The open frame is structured but not closed. It protects the company's operating logic while leaving room for continuous change. The coral core stays specific, warm and unmistakably central.

Adaptive frame

Company core

Open future

Strong at 16 px

The symbol is not a literal C, plug, portal or AI icon. Those readings may appear, but the controlled meaning is always "the system fits the company." Use the lockup when the audience may not know the name.

LOGO SYSTEM

Primary lockup on Warm Paper, Cream or white.

Reverse lockup on Native Ink or dark photography.

Clear space

Keep at least one coral-core height around every side of the mark or lockup.

Minimum size

Mark: 16 px digital or 5 mm print.
Lockup: 120 px digital or 32 mm print.

Small spaces

Use the dark square icon for avatars, favicons and app icons. Do not force the wordmark in.

One color

Use the monochrome SVG only when production cannot reproduce the core colors.

Never: stretch, rotate, add glow, add a gradient, recolor individual parts, put the mark in another shape, reconstruct it with text, or return to the CN monogram.

COLOR

Warm trust first. Signal only what matters.

Ratio: aim for roughly 80% Paper/Cream, 15% Ink and 5% Mint/Coral. Dark sections can invert this, but coral remains rare.

Accessibility: Native Ink is the default text color on Paper, Mint and Coral. White is for Ink and Deep Evergreen only.

TYPE AND LAYOUT

GEORGIA / EDITORIAL DISPLAY

Large ambition.
Safe first step.

Use for headlines, key statements and pull quotes. Keep line lengths short. Sentence case only.

GEIST SANS / OPERATIONAL CLARITY

We learn how your company really works.
Use Geist Sans for body copy, navigation, buttons, forms, tables and every system interface.

GEIST MONO / SMALL SYSTEM LABELS

DISPLAY	48-78 px / 0.98-1.05 line height
SECTION	32-56 px / 1.0-1.1 line height
BODY	16-20 px / 1.5-1.7 line height
LABELS	10-12 px / 700-800 weight / tracked

Layout: Use generous margins, visible alignment and one dominant idea per screen. Prefer bordered modules and process paths to floating cards. Do not fill empty space with decoration.

Show real work and clear systems. Never make “AI” the visual subject.

PHOTOGRAPHY

Documentary and specific

Show real people in their working context, natural light and honest environments. Avoid staged laptop smiles and futuristic control rooms.

DIAGRAMS

Processes with a point

Use clean paths, modules and one warm core. Every line should help explain a decision, handoff or version.

ICONS

Simple and structural

Use 1.5-2 px line icons with rounded joins. No mixed icon styles, 3D icons, emoji or decorative tech symbols.

One coherent system across the website, social profiles and founder-led outreach.

PROFILES

LinkedIn and X avatars plus platform-safe banners.

SHARE

Website open-graph card and English/Swedish launch posts.

SELL

English/Swedish one-pagers, presentation cover, proposal cover and assessment cover.

Use the smallest asset that moves the conversation forward.

1

Cold visitor

Website hero, safe migration story, proof and conversational assessment.

3

Warm introduction

Send the matching one-pager, then point to the assessment rather than attaching a long deck.

5

Qualified opportunity

Return the assessment in the branded assessment template with one concrete VO.

7

Daily correspondence

Use the lightweight HTML signature. Never turn every email into a banner ad.

2

LinkedIn discovery

Company avatar, cover and one founder-led launch post in the reader's language.

4

First meeting

Use the presentation cover and website process. Spend the meeting on their workflow, not our slides.

6

Commercial discussion

Use the proposal cover and repeat the VO guarantee, ownership and safe V1 migration rule.

8

New proof

Replace generic explanation with real outcomes as customers approve case studies.

Do not overbuild marketing before evidence.

Paid-ad systems, event collateral, merchandise, a separate CRM brand and a large image library can wait. The first 10 customers should teach us which proof, industry examples and objections deserve permanent assets.

Keep the identity stable. Let customer evidence improve the message.

The name, Coremark, primary colors, typography and brand architecture are frozen. Change them only when real customer behavior reveals a material problem.

Owner: Company Native

Primary source: this guide and the SVG masters in the brand kit

Review trigger: evidence from sales conversations, assessments, customer use or accessibility - not novelty
